

AUTOMATIC CONFERENCING SERVICE

ABSTRACT OF THE DISCLOSURE

- 5 One embodiment disclosed relates to an apparatus for an automatic conferencing service. The apparatus includes at least a service logic execution environment in a telecommunications service network, and an automatic conferencing service running in the service logic execution environment.
- Another embodiment disclosed relates to a method of scheduling an automatic conference.
- 10 A conference request, including conference information specified by a user, is received by an automatic conferencing service running in a service logic execution environment within a telecommunications network. The automatic conferencing service registers the conference and sends notification to attendees of the conference.
